Title: Touch plate structure for notebook computer

Publication date: 2001-04-21

Inventor: Shiu Bo-Lang (TW)

Applicant: Quanta Comp. Inc (TW)

Abstract of Taiwan Publication No. 431607

The present utility model discloses a touch plate structure for notebook computer comprising: a circuit board, provided with a touch sensing area and at least two switching elements thereon; and a housing to enclose the circuit board, in which the housing includes an upper housing and a lower housing and the upper housing is provided with a keystroke which corresponds to each switching element of the circuit board and a touch-pressing portion which corresponds to the touch sensing area. Accordingly, the touch pad structure for notebook computer is a structure of uncomplicated members, and it is easy to assemble and has higher compatibility.
